Hi Noah,

As we discussed, EPA would like to offer Diamond X Ranch an opportunity to be notified if there are releases of partially treated acid mine drainage from the ponds at Leviathan Mine, which seems probable. Bear in mind that these releases would add a relatively small amount of loading at a time of year when the Channel Underdrain and Delta Seep are being released untreated.

EPA will send a pre-release notification regarding the situation generally, and if there are releases, we will send a notification as soon as we know within business hours.

Please send me the names and email addresses of individuals we should notify. When we talked earlier, you thought that would probably be: Jeff Dagdigian, David Parks and Noah Perch-Ahern.

Thanks.

Regards,

Josh
